Results

EasyReg simplifies task delegation by allowing users to assign specific roles such as contributors, internal auditors, external auditors, project owners, and administrators.

Projects are linked to security frameworks, with all evidence and policy documentation managed in one place. Every compliance activity is logged for full transparency.

Conclusions: We believe EasyReg will help organizations stay organized, save time, and build trust with auditors and clients by streamlining security compliance, reducing the risk of missing important requirements, and providing an efficient way to demonstrate adherence to industry standards.
